PROFESSIONAL SUMMARY

Java Full Stack Developer and Information Science Engineering graduate with 300+ hours of professional training, 5+ applications, 250+ coding problems, and 100+ SQL queries. Experienced in delivering MERN, Spring Boot, Flutter/FastAPI, database, and AI/ML solutions through team collaboration, analytical problem solving, testing, and deployment.

TECHNICAL SKILLS

Programming: Java, Python, Dart, JavaScript, TypeScript, SQL, HTML5, CSS3
Web and Backend: Spring Boot, MERN stack, MongoDB, Express.js, React.js, Node.js, Flask, FastAPI, RESTful APIs, JDBC, JWT
Mobile and Cloud: Flutter, Riverpod, Firebase Authentication, Firebase Cloud Messaging, Vercel, Render, ngrok
AI ML and Data: scikit-learn, linear regression, ONNX Runtime, YOLOv8, NumPy, Pandas, yfinance, NLP sentiment analysis
Databases and Testing: MySQL, SQLite, Drift, PyMongo, Pytest, unittest, Flutter Test, Selenium
Tools and Core: Git, GitHub, Docker, CI/CD, Kubernetes, XAMPP, OOP, data structures and algorithms, CRUD, debugging, query optimization

WORK EXPERIENCE

Java Full Stack Developer Intern | KodNest Technologies **Jan 2026 - Present**
Internship and Professional Training | Bengaluru, Karnataka

- Delivered 5+ database-backed applications during 300+ hours of training in Core Java, Advanced Java, SQL, Spring Boot, and React.js.
- Collaborated on 3+ team assignments, communicated implementation decisions, and coordinated responsive UI, REST API, authentication, and testing work.
- Solved 250+ Java, data structures, and algorithms problems, achieving 90%+ performance in coding assessments.
- Analyzed and optimized 100+ SQL queries using joins, subqueries, window functions, and indexing.

PROJECTS

Medoc | MERN Stack Developer **2026**

- Engineered a MERN web platform for online medical-session booking, connecting patients and doctors through a shared appointment workflow.
- Designed 2 role-specific interfaces for scheduling and appointment management; connected React.js to Express.js/Node.js services, stored workflow data in MongoDB, and tested locally with XAMPP.

StockVision AI | Full Stack and ML Developer **May 2026**

- Created an AI stock-analysis platform with ticker search, JWT-protected watchlists, interactive charts, and a React.js/Flask/MongoDB architecture.
- Modeled 90-day price history with linear regression and NLP sentiment to generate 3 recommendation states: Buy, Sell, or Hold.
- Integrated Flask REST endpoints with the frontend and visualized predictions using Recharts, scikit-learn, yfinance, Pandas, and NumPy.

RoadLens | Mobile and AI Developer **Aug 2026 - Sep 2026**

- Developed a Flutter road-inspection app that combines camera and GPS data with FastAPI and ONNX Runtime YOLOv8 damage detection.
- Implemented bounding boxes, severity results, Drift/SQLite offline synchronization, Firebase authentication, notifications, and role-based complaint tracking.
- Verified quality with 67 automated tests (34 Flutter and 33 backend); deployed inference identified a pothole fixture at 96.18% confidence.

EDUCATION

Bachelor of Engineering in Information Science and Engineering **2021 - Jul 2026**
Rao Bahadur Y. Mahabaleshwarappa Engineering College | Ballari, Karnataka | CGPA: 7.86/10

CERTIFICATIONS

Databases for Developers Foundations | Oracle Dev Gym, Oracle Corporation
Introduction to Big Data | Simplilearn SkillUp | Nov 2025
Deep Learning Fundamentals | IBM Cognitive Class | Nov 2025
Full Stack Java Development with AI | KodNest | May 2026
VibeAthon 36-Hour Hackathon Participation | Replit and Polaris School of Technology

ACHIEVEMENTS

Placed runner-up in the Replit-hosted VibeAthon by collaborating under a 36-hour deadline to deliver and present a working project solution.

LANGUAGES

English, Hindi, Kannada
